IQ Modulation

Any passband signal $s_p(t)$ can be written as

IQ Modulation

Any passband signal $s_p(t)$ can be written as

$$s_p(t) = \sqrt{2}s_i(t) \cos(2\pi f_c t) - \sqrt{2}s_q(t) \sin(2\pi f_c t)$$

IQ Modulation

Any passband signal $s_p(t)$ can be written as

$$s_p(t) = \sqrt{2}s_i(t) \cos(2\pi f_c t) - \sqrt{2}s_q(t) \sin(2\pi f_c t)$$

where,

$$s(t) = s_i(t) + js_q(t)$$

IQ Modulation

Any passband signal $s_p(t)$ can be written as

$$s_p(t) = \sqrt{2}s_i(t) \cos(2\pi f_c t) - \sqrt{2}s_q(t) \sin(2\pi f_c t)$$

where,

$$s(t) = s_i(t) + js_q(t)$$

is called the complex envelope of $s_p(t)$.

IQ Modulation
